BUCS Pro: Install & Activate

saikiranthatikonda-coder.github.io/Avengers-Bobbiey-UCS/#get

About 10 minutes, start to finish. You need a Windows 10/11 PC and any UPI app.

01 Install Python 3.11 or newer

Get it from **python.org/downloads**. On the first installer screen, tick **"Add python.exe to PATH"**, then click Install Now.

02 Download BUCS and extract it

On the website, click **DOWNLOAD BUCS (.ZIP)**. Right-click the ZIP → **Extract All**, for example into **Documents**. You get a folder named `Avengers-Bobbiey-UCS-main`.

03 Double-click Start BUCS.cmd

It's inside that folder. The first launch sets everything up (3–5 minutes, keep the window open), adds a **BUCS** shortcut to your desktop, and opens BUCS in your browser.

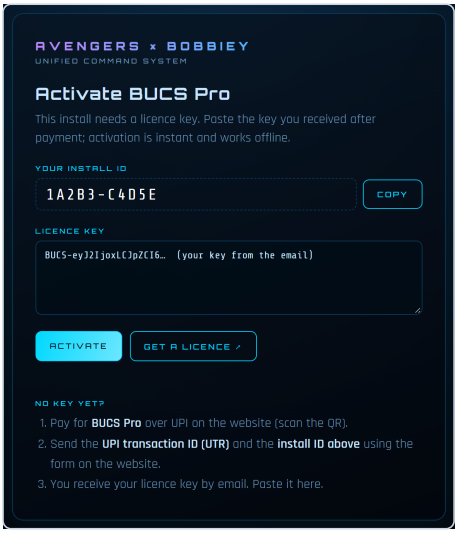

If Windows shows **"Windows protected your PC"**, click **More info → Run anyway**. It appears for any new script downloaded from the internet.

The Get Started section on the website: download button and requirements.

04 Copy your install ID

BUCS opens on the activation screen. Click **COPY** next to your install ID (yours will differ from the example).

The activation screen (example install ID).

05 Pay with UPI and send details

In the website's **Pricing** section, pick 1 or 12 months, scan the QR with GPay, PhonePe, Paytm or BHIM, then enter your **email**, the **UTR** (UPI transaction ID) and your **install ID** and press **SEND DETAILS**. Your email app opens; press send.

The payment panel: QR, plan picker, details form.

06 Paste your key and ACTIVATE

Your licence key arrives by email once the payment is confirmed (usually within a few hours). Paste it into **LICENCE KEY** on the activation screen and press **ACTIVATE**. BUCS starts immediately, with no restart.

IF SOMETHING GETS STUCK

"Python 3.11 or newer is required"
Install Python (step 1), tick Add to PATH, then run Start BUCS again.

Setup stopped while installing
Check your internet connection and run Start BUCS again. It retries cleanly.

Browser didn't open
Open **http://127.0.0.1:8765** yourself while the BUCS window is running.

"Key belongs to another install"
Send us the install ID shown on this PC; we'll reissue the key.

Closing BUCS
Close the black BUCS window. Open it again from the desktop shortcut.

WHAT'S INCLUDED IN BUCS PRO

- Command dashboard, HUD and 8-agent AI roster
- LLM switch: Claude, OpenAI, Gemini, Groq, local Ollama
- Threat intelligence, decision support, live telemetry
- Voice control, conversation mode, webcam vision
